# A little less paperwork.

## Make space for the work that matters.

A PDF can be a proposal, a reading list, a rough idea or a finished piece of work. The tools around it should help you move forward, not ask you to start another subscription.

### Your files stay on your computer.

Read. Leave a note. Make a change. Save a copy.

Try this page: highlight a sentence, add a note, or replace a supported source text run. Then save and reopen a copy. You should be able to see the change in a real PDF.

# Open tools. Clear choices.

Folio is an independent, open-source PDF workspace.
Its source is yours to inspect, learn from and improve.
No Acrobat installation is needed.

## Read and review

## Edit and organize

## Save and share

# Before you share.

Keep an original. Share a deliberately saved copy.
Review edits, permissions and any unsaved changes.
An annotation over a word does not remove that word.
Cropping a page does not erase hidden content.

Folio's applied redaction exports a separate image-only PDF.
It removes original objects, but also loses searchable text
and other document structure. Read the limits first.

# Notes, not noise.

A small checklist for an ordinary day:

- [ ] Read the draft.
- [ ] Highlight the part worth remembering.
- [ ] Leave a useful note.
- [ ] Put the pages in the right order.
- [ ] Save a copy with a clear name.
