Meet your new paperwork space.

Read closely. Leave a thought. Put your pages in order.
A familiar PDF workspace, with a little more breathing room.

Start with something worth highlighting.

Select a passage, then choose Highlight. Your mark becomes a real PDF annotation that travels with the document.

Make yourself at home

Open a PDF from your device. Use the page rail to move around, or search for a word to jump straight to what matters.

A note, right where you need it

Choose Add a note and click on the page. Your comments stay connected to the document, not tucked away in another app.

This is an editable example. Try a highlight, add a note, or turn the page.

A closer look.

A good review is a conversation with the document.
Keep the important parts easy to find.

Find the right passage

Press Command+F to search this document. Search reads the PDF text layer; scanned pages without text need OCR, which is not in this first release.

Highlight with intention

Choose the highlighter and drag across text. You can also select text with the cursor, then use the small Highlight action.
Your highlights are saved as standard PDF annotations.

Leave a useful note

Choose Add a note, click a location, and write your comment.
Open Comments to revisit your notes or remove a mark.

Your original stays yours.

Save a copy to keep the source file unchanged.

Everything in order.

Documents do not always arrive in the right order.
Make the small changes that make the whole thing work.

Move a page

Open Organize pages. Drag a thumbnail to a new position, or use the Move earlier and Move later buttons for keyboard access.

Turn things around

Rotate the current page in either direction. Rotation is saved inside the PDF, so the next reader sees the same orientation.

Keep only what you need

Remove a page after confirming the change. Undo is available within working history. Folio will not remove the final page.

Ready for your own document?

Use Open PDF, or drop a PDF into the window.
